

Real Estate Management with SAP® RE-FX

Flexible workspace and contract
management at the heart of
SAP RE-FX

Businesses can now boost company value by increasing the efficiency of their real estate management. The flexible real estate management tool SAP RE-FX gives you the power you need to optimize real estate-specific business processes across the board and unlock new business potential. By implementing a standardized and integrated SAP system environment and taking advantage of SAP RE-FX functionality, you will find that you can cut your real estate administration costs considerably. We focus all our efforts on ensuring that the SAP RE-FX solutions we offer fulfill your specific real estate management needs.

Background

Managing an extensive real estate portfolio is no simple task and involves considerable commercial, technical and legal effort. To make matters worse, the system environment used for such management activities often lacks the required functionality and integration. These problems are an all-too-common reality with many real estate software products and indeed many SAP® components used for commercial real estate management. In practice, companies must be able to guarantee company-wide access to all key real estate information if they are to successfully seize business opportunities that come their way. This requires an incredibly flexible system environment that offers a high level of integration and the power to provide all the information needed for reporting in the field of controlling and accounting.

The challenge

We will implement SAP RE-FX at your company and combine this with other SAP components to create a flexible real estate management system that is tailored to your needs. The first step towards optimizing real estate management using SAP RE-FX is to analyze the specific situation faced by you, the client. We do this by focusing on business processes, looking at individual strategic, operational and supporting tasks and discussing what steps could be taken to optimize these. This reveals main areas for action to facilitate the implementation of a business process-oriented system environment that incorporates both SAP RE-FX and the neighboring modules FI, CO, IM/PS, MM and PS.

Real Estate Management with SAP RE-FX

The result

SAP RE-FX has the power and functionality to satisfy all real estate management needs:

- ▶ Flexible usage of rental areas by pooling workspace according to usage
- ▶ Comparison of usage through representation of the actual real estate structure from an architectural perspective
- ▶ Mapping of complex rental contracts by means of sales and index rules and graduated rental scales
- ▶ Seamless integration of SAP RE-FX into an existing SAP infrastructure

Once SAP RE-FX is successfully implemented at your company, you will see a significant improvement in the quality of information provision and processing. You will also benefit from improved handling of your real estate portfolio and/or your entire real estate management process.

Our competencies

IDS Scheer Radermacher works together with you to systematically identify weaknesses in the business processes that underpin real estate management. We examine the corporate strategy, business management, organization and day-to-day business operations at your company and use the information gleaned to develop customized IT solutions for you based on SAP RE-FX and other cross-system SAP components. IDS Scheer Radermacher offers a wide range of competencies relevant to this field, including:

- ▶ Construction project controlling
- ▶ Cost management
- ▶ Organizational consulting
- ▶ Controlling software
- ▶ IT implementation and integration for real estate companies (specializing in SAP, particularly SAP RE-FX)
- ▶ Business process management

Business process management encompasses all of the above procedures and ensures that the solution we implement is geared toward your process requirements.

- ▶ Sound, in-depth knowledge of implementing SAP RE-FX-based system environments for real estate management
- ▶ Implementation expertise covering all SAP components and all stages of the real estate lifecycle

Implementing SAP RE-FX provides the groundwork for the development of a continuous improvement program at your company. After all, an optimized value contribution and service quality are pivotal factors in reducing operating costs and costs for building-related services.

About IDS Scheer Radermacher

IDS Scheer Radermacher has been a successful player in the field of consultancy services for industrial enterprises and service providers, governments, federal states and municipalities for over ten years. The specialist consultancy services are geared toward the management of real estate, facilities, services and construction processes. The main focus during both the design and implementation of the solutions is a systematic and holistic approach to corporate processes. IDS Scheer Radermacher is a 100% subsidiary of IDS Scheer AG – a company that enjoys a global presence. IDS Scheer Radermacher harnesses the expertise of the IDS Scheer Group in the fields of construction and real estate management. The software and consulting company IDS Scheer develops Business Process Management solutions for corporations and public authorities. With its ARIS Platform for Process Excellence, the company offers an integrated and complete tool portfolio for strategy, design, implementation and controlling of business processes. The IDS Scheer Radermacher team has been awarded the status SAP Special Expertise Partner for Real Estate Management in recognition of its proven expertise in construction and real estate management.

Would you like to find out more about the options available to you and about our management experience in Implementation of SAP RE-FX?
